

Shortest Path Algorithms Verification with Idris

Thesis Outline

Yazhe Feng

February 4, 2019

1 Introduction

- State the problem: Dijkstra's and Bellman-Ford algorithms are widely used in real-life applications, however existing work for verifying shortest path algorithms are limited
- Contributions
- Structure of thesis

2 Motivation

- Given the significance of Dijkstra's and Bellman-Ford in real-life applications, it is important to verify their correctness
- ^{expand on this} Present algorithm verification as a programming issue, and that programming languages such as Idris can be used to implement algorithm verification
 1. importance of verification: what can we get from verification? (applications, what might go wrong if we don't verify?)

3 Background

- Introduce Idris programming languages and its features (dependent types etc.)
- Brief introduction of Dijkstra's and Bellman-Ford algorithms

4 High-level Contribution

- Pseudocode for Dijkstra’s and Bellman-Ford, followed up by overview of the implementation of both algorithms in Idris
- Theoretical proofs of Dijkstra’s and Bellman-Ford based on the Idris implementation

5 Low-level Contribution

- Details on the implementation of Dijkstra’s and Bellman-Ford in Idris: data structures, functions, program control flow, and assumptions
- Assumptions of the proof (expected qualities of input data etc.)
- Overall structure of our verification, and details on the proof of important lemmas and theorems in Idris

1. Provide types and interpretation of types for key lemmas

6 Discussion

- Progress on verification versus initial expectations
- Things that have been tried but failed to achieve
- Reflection on the process of program verification: useful tips and advices etc.

7 Related Work

- Present existing work of Dijkstra’s verification
 1. Verifying Dijkstra’s Algorithm with KeY: https://kola.opus.hbz-nrw.de/opus45-kola/frontdoor/deliver/index/docId/420/file/DA_KLASSEN.pdf
 2. Verifying Dijkstra’s algorithm in Jahob: http://lara.epfl.ch/w/_media/dijkstra.pdf
- Comparison with existing works

1. Verifying in Idris versus other languages or proof assistance
2. Different approaches taken during verification

8 Conclusion

- Briefly conclude motivations, goals, and contributions
